Readiness — Elderly / Mobility Limited

Red Alert SOP — For buildings WITHOUT a Mamad / Mamak

Protected Space Setup

- [ ] **Protected space pre-selected and practised**
  Identified from every room; practised reaching it
- [ ] **Bed or sofa repositioned against inner wall (if needed)**
  Below window line, not facing door — for those who cannot move quickly
- [ ] **No shelves or heavy objects above bed/sofa**
- [ ] **Routes to protected space cleared of obstacles**
  Rugs, plant pots, chairs, cables — anything that could trip or block a wheelchair
- [ ] **Grab rails or support available along the route**
  Wall-mounted rails, furniture positioned for support, walker accessible

Equipment & Supplies

- [ ] **Wheelchair / walker / mobility aid within reach**
  Charged if electric; not folded away in a closet
- [ ] **Phone within arm's reach at all times**
  Charged, volume ON, Red Alert app active
- [ ] **Medications in protected space or go bag**
  Especially time-critical: insulin, inhalers, heart medication
- [ ] **Chair positioned in stairwell (if that's your protected space)**
  For sitting during the 10-minute wait
- [ ] **Torch within reach — not just in go bag**
  Especially important if mobility is limited in the dark

Support Network

- [ ] **Buddy system arranged with a neighbour**
  Someone who will check on you or help you move when the siren sounds
- [ ] **Neighbour has a key or knows how to reach you**
- [ ] **Emergency contacts saved and easily accessible**
  Family, neighbour buddy, building committee
- [ ] **Family members know the plan**
  Who helps whom, who grabs what, designated roles during a siren
